

## RIU Remote Indicator Units 24Vdc

The Cranford Controls' range of Remote Indicator Units has been designed to indicate the status of a single or multiple group of fire detectors in alarm condition, using LED indication. The units are compatible with the majority of conventional and addressable fire detectors and can also be used for security and process control applications.

The standard version is a single gang flush mounted unit, with or without 'Fire Detector Operated' text and is also available with a deep back box for surface mounting.

## Features

- Flush or surface mount variants available.
- Designed to fit to a single gang deep back box
- Multiple language text option available.
- Custom legend available on request
- IP66 weatherproof version available
