

Mains Voltage Safety isolator

The Cranford Controls' range of mains voltage safety isolator switches provide a safe and secure method of isolating the voltage supply to the mains voltage. Protected by a 4 Amp fast blow fuse, which is disconnected from the mains supply when isolated, the unit is supplied complete with a standard single gang back box and can also be mounted on a standard 20mm conduit box.

Features

- Safe reliable isolation of Fire Panels and Power Supply Units
- Compliant with the installation requirements of BS5839 Part 1
- Robust modular design
- Red or white version available
